

RapidView

RapidView is the newest PDA innovation from RapidMap developed specifically to support synchronized data between the field and office for an integrated Asset Management system.

The RapidView system provides a complete solution for digitally recording inspection and maintenance works in the field.

And as with all RapidMap solutions, it is easily deployable, easy to use, robust and can support concurrent data collection without any risk of over writing.

Inspired Mobile Inspection Solution

inspire

- Enables multiple layers of data
- Auditable reports are quickly raised using up to date data from the field
- Support endless types of inspections and maintenance recording
- Enables numerous staff, concurrently capturing data
- Synchronize back to a database, on pc or server
- Inspection Id's, time/date stamps with no fear of over writing

Asset Layers:

Street Trees

Street Furniture

Playgrounds

Weeds & Vegetation

Properties

Water Quality

Pumps & Valves

Utility Assets

Power Poles

Golf Courses

Roads

Lighting

Footpaths

Drainage & Waste Water

Traffic Devices & Signage

Park & Reserve Assets

RapidView Operating Standards:

- Pocket PC and MapInfo MapX Mobile platform
- Operates on handheld devices of 2002/2003 Pocket PC versions
- Customisable to your organization and business activities
- Customisable forms driving data capture using the RapidView form builder
- Centralising data from multiple sources and field inspectors into a secure and auditable system
- Interfaces to other devices – Digital Cameras, GPS and blue tooth peripherals eg: barcode readers

RapidMap - forward thinking, a meticulous approach, a global perspective.
