

Crest – Field Mapping and Inspection Software

RapidMap guides Government and Corporate clients to discover the strategic advantage of field personnel using digital maps and form interfaces to manage and report on their Assets and Works.

Our clients have benefited enormously through the increased efficiencies delivered by recording observations, attributes and works conducted while on-location in the field.

Crest is an easy-to-use, digital data capture and works recording solution with an inbuilt ability to view and share activity history so your team can make the right decisions!

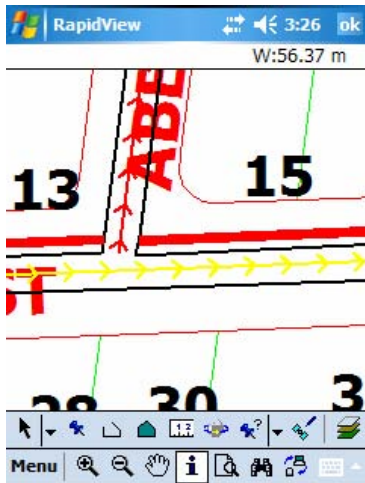

If you want to move away from pen and paper and enjoy a reliable way to record accurate information in the field, then **Crest** is for You!

RapidMap Crest: Your Solution

Clients have many diverse and complex uses for this system including: asset inspections, maintenance and noxious weeds management, pest control, disease, risk management and Road Management Act compliance. We have a strong history of successfully enabling our clients to achieve these objectives.

Established clients include: Parks Victoria, North Sydney Council, Queensland Health, to name a few.

Crest: how it works..

Crest can be easily customized for your organisation and workflow.

In the field, users easily add a point, line or region to their map either manually or using GPS. This triggers a pre-defined form to record their work or observation.

For recurring inspections or works against assets, an activity is recorded with location, time, date, inspector and any new attributes. Field users then synchronise these records to the corporate database. It is also easy for **Crest** to include digital photos for each investigation as proof of condition.

Teams gain real benefit through viewing historic records while in the field. Often this feature alone prevents duplicated fieldwork. Corporate databases like Asset Management systems and GIS can also take advantage of the consistent and accurate data delivered from the field.

Crest is designed for use on many mobile platforms running Windows OS such as Laptops, PDAs, Smart Phones, PCs and Pen Tablet computers.

Contact us about mobile computing solutions to best suit your project and budget.

RapidMap Crest: information integrity

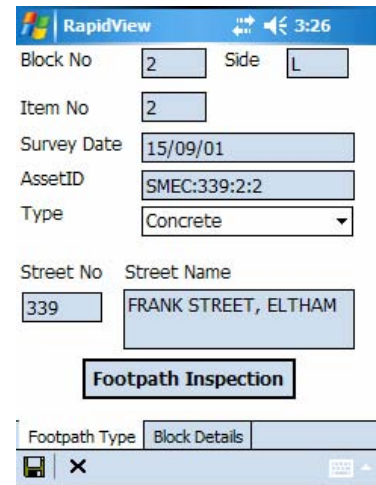

An important advantage you'll have with **Crest** is its ability to ensure information integrity.

Crest supports quality assurance of your data collection process through customised forms. Your forms are designed to reflect your work, provide mandatory fields, historic record checking and pre-populated fields or pick lists gives your team efficiencies you have only imagined till now!

Crest maintains information integrity when multiple field users are returning data back to a single database, concurrently.

Crest ensures that each inspection will capture unique information to ensure integrity of the corporate database information.

Now you can embrace new technology with ease and gain a return on investment you can demonstrate!
