

RapidMap – forward thinking, a meticulous approach, a global perspective.

Identify, inform, interact, integrate, inspire.

RapidMap understands the best decisions are underpinned by a meticulous approach to identifying your current position, integrating and informing your options to chart the most efficient way forward. Interacting with each other and our customers to result in inspired outcomes. Whether that be a fire fighter battling an inferno to find the most effective route to save lives, a conservationist creating a detailed inventory of flora, fauna, weeds, waterways and soil conditions, a works manager keeping track of the maintenance needs of our bus stops, road signs and footpaths to a traveller on the verge of navigating their next adventure.

Everything we do leads to ONE thing – graphical descriptions of precise points in time and space.

Complex spatial information that communicates.

Thinking strategically, analytically, creatively, critically.

RapidMap understands that often the most effective solutions are underpinned by a meticulous approach to our internal processes.

We take a disciplined approach to how we develop new solutions, the level of back-up and service we offer our customers, our willingness to get involved.

We strive to provide solutions that are always easy to use, robust and reliable – even under extreme situations and above all, meet the highest quality standards. The RapidMap team includes engineers, software developers, surveyors, cartographers, scientists, environmentalists and business professionals.

Individually and collectively we are all dedicated to performance, achievement, growth, productivity, progress and above all, accountability.

RapidMap Solutions

Innovative, Dynamic, A global perspective.

The world of spatial technologies is vast and unlimited in its scale. Spatial activities occur in every facet of our lives. Whether it is a Natural disaster, conservation of sites of environmental significance, monitoring and control of noxious weeds, management and maintenance of public assets like roads, streetscapes, power, gas and water infrastructure, buildings and road signs, footpaths and public transport.

Besides being user-friendly, we believe that it is our responsibility to ensure our products and services are straightforward, effective, reliable and robust. Constantly monitoring our range to ensure it is directly linked into your business requirements.

RapidMap solutions and services support pre, during and post management activities relating to natural disasters, accidental disasters and terrorist activities. Information about the shortest routes, the number of people potentially affected, the property under threat and the facilities available are all urgently required in a disaster.

RapidMap's Emergency solutions like Instant Response™ allow our customers to:

- Identify impact zones
- Plan damage control measures, quickly and effectively
- Input data to determine response requirements
- Access instant and visual display of critical information by location
- Develop action plans for the coordination and implementation of emergency disaster management efforts
- Maintain records as well as status of the ongoing rehabilitation work required
- Wirelessly capture and manage data

Our environmental solutions are contributing to creating GIS datasets and graphical descriptions of the extent and condition of our natural resources. We collect quality data on environmental impacts, land use, weed infestation and change. RapidMap solutions like WeedMap™ assist our customers to plan the management of sensitive areas, identifying priority locations and strategies for protection and renewal.

We have built our capabilities over 10 years in developing spatial solutions for key infrastructure like roads, light poles, street furniture, gas and water pipes, power lines and telecommunications networks. RapidMap have created specialist solutions like AssetMap™, RapidView™ AssetMap Traffic™, and RapidAsset™ which incorporate:

- Field inspection
- Data capture
- Creation of datasets
- Asset Management and
- Asset Maintenance

And we're leveraging our experience to develop compelling and robust new solutions to assist travellers navigate their world.

We take a global perspective ensuring that all of our products will work as a complete, individual unit or as a component of an integrated solution.
